Sravan Jaggala

BI & Analytics Engineer

Semantic Modeling & SQL · Data Transformation & Performance · Governed Analytics at Scale
Chicago, IL | +1 (331) 275-9624 | sravan.jaggala@outlook.com | linkedin.com/in/sravan-jaggala | sjaggala.github.io

SUMMARY

Analytics and BI engineer with 7 years designing the data models, SQL transformation logic, and governance layer behind enterprise business intelligence across retail, manufacturing, finance, and supply chain. Builds centralized semantic models with documented metric definitions, pushes transformation to the source for performance (one rebuild cut dataset refresh from 2.5 hours to roughly 7 minutes), and ships through Azure DevOps CI/CD across Dev, QA, and Production. Owns delivery from stakeholder requirements through governed, production-grade analytics presented to senior leadership, and has led cross-functional teams of up to six. Increasingly focused on AI and generative BI: natural-language, conversational analytics and prompt-driven report generation with Copilot in Power BI, reinforced by graduate study in machine learning and data mining at UIC.

KEY SKILLS

Data Modeling & SQL: Dimensional modeling (star and snowflake) with documented grain and metric definitions; centralized, governed semantic models; advanced SQL across SQL Server, Oracle, Snowflake, SAP HANA, and Google BigQuery (joins, CTEs, window functions, views, stored procedures); data validation and reconciliation across source systems.

Data Transformation & Performance: ELT-style source pushdown and query folding; Power Query (M) transformation pipelines; dataflows for reusable staging; incremental refresh; dataset performance tuning and refresh optimization.

BI & Visualization: Enterprise Power BI; DAX; Power BI Embedded Analytics (embed for organization and for customers); SSRS and paginated reports; Tableau (basic).

Platform, DevOps & Governance: Azure DevOps CI/CD deployment pipelines (PowerShell + Power BI REST APIs) across Dev, QA, and Production, with Git-based version control; REST API automation; Microsoft Fabric (hands-on PoC); Power BI Service and tenant administration; workspace and app lifecycle; row-level security (static and dynamic); on-premises data gateways and gateway clusters; Premium Capacity and Premium Per User licensing; external / B2B sharing; refresh scheduling and monitoring.

AI & Generative BI: Natural-language and conversational BI (Power BI Q&A and Copilot in Power BI); prompt-driven generation of reports, pages, and visuals; conversational-analytics interface design with AI/ML engineers; applied LLM-assisted analytics workflows for dataset preparation and insight validation.

Development, Languages & Tools: Power BI custom visuals in ReactJS and TypeScript; DAX, T-SQL, Power Query / M, PowerShell, Python (pandas, matplotlib); HTML and CSS; Tabular Editor, DAX Studio, VertiPaq Analyzer, ALM Toolkit; Power Apps and Power Automate (basics); Jira, ServiceNow, Trello.

PROFESSIONAL EXPERIENCE

Graduate Hourly University of Illinois Chicago, Admissions & Recruitment — Feb 2026 – Present
Chicago, IL · Part-time, concurrent with graduate study

- Build and maintain CRM queries, datasets, and Tableau dashboards from Slate admissions data, supporting daily recruitment operations for the College of Business Administration.

Senior Technical Consultant Mouri Tech — Apr 2023 – Dec 2025
Hyderabad, India

- Re-engineered a client's enterprise dimensional data model and pushed transformation logic upstream to the source through query folding and incremental refresh, cutting dataset refresh time from 2.5 hours to roughly 7 minutes (about 95%).
- Built Azure DevOps CI/CD deployment pipelines using PowerShell and Power BI REST APIs across Dev, QA, and Production, reducing manual deployment effort by about 80%.
- Designed centralized, governed semantic models with documented grain and metric definitions as a single source of truth, translating stakeholder requirements into production-grade analytics and presenting results to business users and senior leadership.
- Led a phased migration of 10 complex, high-visibility reporting solutions from QlikView to Power BI, re-building the underlying data models and business logic and validating output parity against the legacy system.
- Built natural-language Q&A experiences and used Copilot in Power BI to generate reports, report pages, and visuals from prompts, designing conversational report experiences with AI/ML engineers that broadened self-service adoption.
- Led teams of two to six engineers across concurrent client engagements while contributing hands-on; in the final year functioned as an associate manager, owning delivery direction and team leadership end to end.
- Co-developed a reusable single-date-picker custom visual in ReactJS and TypeScript, deployed organization-wide, alongside distinctive report UX (pop-out filter panes, dynamic measure and dimension selectors, landing-page and navigation-hub reports) that earned repeated client recognition.

Business Consultant Blue Yonder Feb 2022 – Dec 2022

Hyderabad, India

- Delivered an embedded-analytics solution integrating Power BI reports into an external Azure application (Copernicus) with .NET developers, using Azure app registrations and REST APIs.
- Diagnosed and resolved embedding, authentication, and access issues by validating configurations and testing report behavior across environments.

Senior Software Engineer HCL Technologies Dec 2020 – Jan 2022

On payroll of Pinaki Softcon Pvt Ltd · Haryana, India

- Led a platform migration from Oracle to Snowflake, re-engineering the data models and source connections for continuity and standing up a greenfield cloud analytics environment; migrated the top 100 of 2,000+ legacy Oracle BIEE reports with proofs of concept that validated parity with the source system.
- Owned end-to-end development and delivery of all reporting as an individual contributor, and administered the Power BI tenant for a 250+ user base, managing workspaces, gateways, and gateway clusters.
- Built governance and audit dashboards by extracting tenant metadata through Power BI REST APIs, automated with PowerShell; ran user training to accelerate adoption.

Technical Advisor LTI Mindtree Apr 2019 – Sep 2020

Client: Microsoft · Hyderabad, India

- Supported the Microsoft Power BI product for a global user base; promoted to Technical Advisor within six months of joining and led a team of five engineers, sustaining a 4.7+/5 customer satisfaction rating across a high volume of global support cases.
- Resolved advanced development and advisory cases, partnering directly with the Microsoft Power BI product team on complex issues and feature feedback, and administered tenant settings and on-premises data gateways for enterprise customers.

PROJECTS

Arcus Planner Full-stack productivity web app arcus-planner.web.app

- Designed and built a full productivity suite: tasks with Kanban and list views, a Gantt planner, calendar, focus board, and a journal with live transliteration, backed by Firebase Authentication, offline-first local storage, Firestore sync, and real-time sharing.

AI Agent for Engineering Data Extraction Graduate Capstone · AI / Generative BI Fall 2026

Sponsored by a global industrial manufacturer · Graduate capstone

- Co-designing an AI agent that extracts engineering data (dimensions, tolerances, part information) from heterogeneous sources (2D CAD, scanned drawings, PDFs, and 3D models) into one structured, confidence-scored schema by pairing deterministic parsing with vision-language models and human-in-the-loop review.
- Contributed the end-to-end solution architecture and deterministic-versus-AI routing, grounded the approach in published VLM and agentic research, and helped define the per-value confidence and source model.

Self-Service BI Platform In development

- Building a web app where users upload an Excel or CSV file to auto-generate dashboard templates with light customization, plus a natural-language interface to query the data with AI, bringing self-service and conversational analytics to non-technical business users.

COMMUNITY & VOLUNTEERING

Solution Specialist Microsoft Fabric Community Jan 2022 – Dec 2024

Forum profile: _sfrost

- Contributed peer-reviewed solutions to the Microsoft Fabric community forum, resolving analytics, data-modeling, DAX, and query questions from a global user base.

EDUCATION

M.S., Business Analytics University of Illinois Chicago Expected Dec 2026

GPA 3.9/4.0 · Relevant coursework: Machine Learning, Data Mining, Advanced Database Management, Supply Chain Management, Business Forecasting using Time Series Methods, Healthcare Informatics, Corporate Finance, Optimization.

B.Tech, Computer Science & Engineering GATES Institute of Technology (JNTUA) 2011 – 2015

Andhra Pradesh, India

CLIENTS & DOMAINS

Retail, CPG & Manufacturing: American Tire Distributors, Stanley Black & Decker, Helen of Troy, TBC, Orora Packaging Solutions, Insulectro

Energy, Finance, Agro-Industrial & Tech: National Grid, Hudson Advisors, SIPEF, Microsoft (product support)
